CHALLENGE QUESTION

The most likely cause of this dropped head syndrome is:

1. Amyotrophic lateral sclerosis
2. Myasthenia gravis
3. Lambert Eaton Syndrome
4. Polymyositis
5. Guillain Barre syndrome

Find the answer and diagnosis in the next edition of *Practical Neurology* or online, posted along with the patient video at PracticalNeurology.com.

Case selected from Dr. Shaibani's **Video Atlas of Neuromuscular Diseases**, in press, by Oxford University Press. Aziz Shaibani, MD, FACP, FAAN is Director of Nerve & Muscle Center of Texas and Clinical Associate Professor of Medicine at Baylor College of Medicine in Houston, TX. He is also Adjunct Professor of Neurology at Kansas University Medical Center in Kansas City, Kansas.
